## 3.1.1 Release

(February-2018)

### Enhancements

#### Support for EVO-180

EVO-180 is now supported within the Camera Configuration Tool

## 3.1.0 Release

(January-2018)

**NOTICE:** The installation tool does not detect older versions of the Camera Configuration Tool. It is advised to manually uninstall the old Camera Configuration Tool before installing the new one.

### Fixes

#### Discovery

EVO-05 cameras with Firmware v1.9.12 are now detected.

Toggling the product filter will not change the status of the camera from ok to unknown anymore.

Firewall did sometimes prevent cameras from being displayed when "refresh" was clicked.

#### UI/Content

Modifications/Refinements have been made to the English copyright statement.

Some of the menu options have been re-organised/re-structured/re-named.

#### Language Selection

Language is now changed when using the language drop down list.

Corrected the installation process in some languages.

Set-up instructions now appear in the language corresponding to that which is installed.

Fixed some error messages showing in the wrong language.

#### Stability

Several improvements have been made to the stability of the application to prevent crashes.

#### Commands

Optimised the factoryreset.cgi and reset.cgi command for clarity and speed.

## Known Issues

### Installation

Installation tool does not detect older versions of Camera Configuration Tool. It is advised to manually uninstall the old Camera Configuration Tool before installing the new one.

### Camera discovery

Camera discovery can sometimes display duplicate entries of the same camera in the list.

### Browsers

Internet Explorer will not handle opening multiple cameras when selecting "View in IE".

### Languages

Some error messages will show up in the wrong language.

### Multiple Configuration Tool Instances

Using more than one instance of the Camera Configuration Tool on one computer at the same time can cause issues with upgrading firmware.

### Import/Export button

The Import and Export buttons are not implemented in this version.

## 3.0.1 Release

(January-2015)

## Fixes

### Language

Some fonts were reduced in size as they became too large in other languages.

## 3.0.0 Release

(January-2014)

### Enhancements

#### Camera discovery

We are now using Link local address when IP is not available.

#### EVO-12

Added support for our new Evolution 12 camera range.

#### Languages

Added support for the following languages:

English	Korean	Italian
Spanish	Chinese	Portuguese
Russian	French	Turkish
Arabic	German	

### Fixes

#### Mouse actions

Mouse wheel scrolling could sometime cause the applications to crash.

#### Installation

2.0.6 version of the Camera Configuration Tool was not detected by the new installer.

Disk cost was not properly calculated.

#### Camera discovery

Initial discovery could sometimes miss cameras

Tool should now discover cameras more efficiently over Wi-Fi connection.

#### UI

Camera firmware column was expanded to accommodate longer firmware names.

#### Commands

Send Command to camera now works appropriately
